Subject: Burke Drain

Hi Linda,

Thank you for the notice of first sitting of the court of revision. For your reference, I have attached a PDF of the area surrounding the Burke Drain. Please note, Union Gas does have active plant in this area. Please Note, the two high pressure mains running parallel to the Burke Drain on Howard Ave.

There are various high pressure mains running along Howard Ave. Please note that a union gas representative must be present during excavation if digging within 1.5 meters from plant at this location. Please call 855-228-6535 at least 3 business days in advance to book a union gas representative.

Please utilize the PDF as a reference during your drainage investigation to determine if there is any possible conflict with future proposed work. It is our preference that any conflict be managed in the design phase for any proposed drain work.

Please Note:

- 1. The shown piping locations are approximate and for information purposes only**
- 2. The drawings are not to scale**
- 3. This drawing does not replace field locates. Please contact Ontario One Call for onsite locates prior to excavating, digging, etc**

Thanks,
Julia
